INSTRUCTIONS FOR USE

Sleeves & Erection Rings

This document is a **universal instruction manual valid for the entire Sleeves & Erection Rings category** (penis sleeves and extender cuffs as well as erection rings in various sizes), not for a single specific product. It contains shared safety, usage, and care information applicable across the entire category.

Contents

01	Safety information	3
02	First use	4
03	Usage — Sleeves & cuffs	5
04	Usage — Erection rings	7
05	Charging & battery	9
06	Care & cleaning	10
07	Storage	11
08	Troubleshooting	12
09	Disposal & recycling	13
10	Responsible person & contact	14

**IMPORTANT**

Before first use, carefully read the entire instructions for use and keep it for future reference — it is an integral part of the product. Also keep the product packaging, as it contains the operating instructions and information about the product, batteries, and charging.

Your safety is our top priority. Before using the product, carefully read and follow all the instructions below.

- Keep out of reach of children, as small parts may be swallowed.
- Only use the product if you are in good physical condition.
- Do not use the product with other people against their will. Only use the product with the consent of everyone involved.
- Use the product safely to avoid injury. Use the product at your own risk.
- For emergencies (e.g. pain or discoloration of the penis), keep emergency scissors on hand to quickly cut through sleeves/cuffs and rings made of flexible material.
- If you have any health issues or concerns, consult a doctor before using the product.
- Do not use the product on injured or irritated skin.
- If unpleasant skin irritation or physical discomfort occurs, stop using the product immediately.
- To avoid illness and infection, do not pass the product on to third parties.
- Carefully read the information on the product packaging to avoid allergic reactions (e.g. to latex).
- Do not use the product if it is obviously not working, is overheating, or has visible defects.
- Do not freeze or heat the product.
- The product is not suitable for commercial use.
- Do not inflate inflatable products beyond the diameter stated on the packaging.
- The product is not suitable for medical use.
- Only charge the product using a suitable charger plugged into an electrical outlet. Follow the instructions for the corresponding power adapter.
- No liability can be accepted for damage or accidents caused by improper use, use of force, modifications, or failure to comply with these safety instructions.

**WARNING**

Never use an erection ring or sleeve for longer than 30 minutes at a time. If you feel pain, numbness, or notice discoloration of the penis, remove the product immediately.

- Before first use, clean the product with warm water and mild soap. To prevent damage to the device, make sure water does not get into the battery compartment. Do not submerge the device in water.
- If a protective element against product damage is included, use it as needed.
- Charge the product or insert batteries (if included). For safety reasons, lithium batteries are usually shipped charged to only 40–50%.

The product may restrict blood flow to the erectile tissue. If you feel very unpleasant pain or other physical discomfort while using the product, or if your penis changes color, remove the product immediately. To avoid tissue damage and bruising, never use the product for longer than 30 minutes.

1

Placing the vibrator (if included)

If applicable, place the vibrator into its designated compartment.

2

Putting it on

Place the product onto the erect penis. Note: for easier application, you can pre-roll it or apply a small amount (!) of water-based lubricant to the inside of the sleeve.

3

Positioning on the penis

Position the product either directly at the base of the penis or just below the glans. Note: if the sleeve is too long, you can roll up the end, or trim it to the correct length with scissors after removal — the sleeve adds girth to the penis, and the erection ring (which may be built in) prevents blood from flowing back too quickly.

4

Ball ring for testicles (optional, if possible)

For a snug, secure fit, pull the testicles through the built-in ball ring — this further increases the blood-flow effect. If this is not possible, continue with step 5 or 8 on the following page.

**SEXUAL AID, NOT A CONDOM**

This product is a sex toy and does not protect against pregnancy or sexually transmitted infections.

**5 Turning on vibration (vibrating models, if applicable)**

To start vibration, switch on the product at the control unit. If this is not possible, continue with step 8.

6 Changing intensity

To change the vibration level as needed, carefully press, turn, or push the control unit.

7 Turning off vibration

To turn off vibration after use, press, turn, or push the control unit back to its original position.

8 Removal

Slowly remove the product from the penis. Note: if the product switches off automatically due to a low battery, do not switch it on again — instead, charge it via an electrical outlet.

Optional features by model

- Sleeves with an especially small diameter are suitable for finger stimulation — place the sleeve on a finger and stimulate the desired areas of the body with the textured surface.
- Sleeves with a firm tip can be used to add length to the penis — first roll up the sleeve, place the firm tip directly against the glans, and only then unroll the sleeve.
- Some sleeves fully cover the testicles as well — apply a generous amount of lubricant to the penis and testicles and pull the sleeve on, first over the penis, then over the testicles.
- Sleeves with a pump bulb: squeezing the pump bulb (repeatedly if needed) increases friction — the sleeve inflates and its outer diameter increases; opening the valve releases the air.

The product may restrict blood flow to the erectile tissue. If you feel very unpleasant pain or other physical discomfort while using the product, or if your penis changes color, remove the product immediately. To avoid tissue damage and bruising, never wear the product for longer than 30 minutes.

1

Placing the vibrator (if included)

If applicable, place the vibrator into its designated compartment.

2

Lubrication

If needed, apply a sufficient amount of lubricant to the inside of the product. Note: a water-based lubricant is recommended.

3

Checking the size

If needed, stretch the product as far as possible with your fingers. Note: for rings made of rigid material, check the fit before putting it on — first measure the circumference of the penis shaft while erect; you can determine the diameter by dividing the circumference by 3.14. For rings worn behind the glans or in front of the testicles, the ring diameter should be 3–5 mm smaller than the diameter of the penis.

4

Putting it on

Place the product onto the semi-erect penis, all the way to its base. Once the penis is fully erect, the ring will prevent blood from flowing back out of the erectile tissue too quickly.

5 Anal beads (on models that have them, if applicable)

Insert the anal beads attached to the ring into the anus. If this is not possible, continue with step 9.

6 Turning on vibration (if applicable)

To start vibration, switch on the product at the control unit.

7 Changing intensity

To change the vibration level as needed, carefully press, turn, or push the control unit.

8 Turning off vibration

To turn off vibration after use, press, turn, or push the control unit back to its original position.

9 Removal

Slowly remove the product from the penis. Note: rings made of rigid material without an opening mechanism can only be removed from the penis once the erection has subsided.

Optional features by model

- Rings with a textured surface or a clitoral-stimulation arm provide even more intense stimulation for your partner during sex.
- Rings with a larger diameter and a built-in testicle ring can also be worn over the testicles — first place the ring on the flaccid (!) penis, and only then pull the testicles through the ring.
- Rings with a smaller diameter can be worn on the glans, just behind its tip, to increase sensitivity and arousal — the glans will enlarge and become firmer.
- Some rings are designed specifically for the testicles — place the ring over the testicles, all the way to their base.
- Rings with a loop are individually adjustable — place the loop around the base of the penis and/or over the testicles and tighten the bead(s) on the loop; the diameter decreases, producing a blood-flow effect.
- Most rings are also suitable for use with a condom — first put the condom on the penis, then follow the steps above. Note: only durable condoms are suitable — avoid thin condoms or condoms with a realistic-feel design, as they carry a higher risk of tearing.

- In most models, the vibration module is powered by a small replaceable or rechargeable battery – check the technical specifications of your specific product to find out which type.
- Only charge the product using a suitable charger plugged into an electrical outlet, following the instructions for the corresponding power adapter.
- For safety reasons, lithium batteries are usually shipped charged to only 40–50%; before first use, charge the product or insert batteries as needed.
- To extend battery life and prevent damage to the product, remove the batteries from the product after each use, or unplug the product from the outlet as soon as the rechargeable battery is fully charged.

**CAUTION**

Make sure water does not get into the battery compartment. Do not submerge the device in water.

- After each use, let the product cool down before putting it away.
- After each use, clean the product with warm water and mild soap and disinfect it with a disinfectant solution suitable for the product. Make sure water does not get into the battery compartment.
- To extend the life of batteries and rechargeable batteries and prevent damage to the product, remove the batteries from the product after each use, or unplug the product from the outlet as soon as the rechargeable battery is fully charged.

**IMPORTANT**

We recommend a water-based lubricant. Check compatibility with the specific material on the product packaging.

- Store the product in a clean, cool, and dry place. Moisture can damage the batteries and motor. Avoid direct sunlight.
- To prevent chemical reactions, store the product separately and not together with other products made of different materials.
- Keep out of reach of children.

The sleeve or ring won't go on comfortably.

Use more water-based lubricant, or choose a model one size larger.

The vibration module doesn't work.

Check / replace the battery, or charge the product per the "Charging & battery" chapter.

Vibration is weak or irregular.

Check the battery level and clean the contacts with a soft, dry cloth.

You feel numbness, tingling, or pain while wearing the ring or sleeve.

Remove the product immediately. If the problem persists, see a doctor.

CAUTION

If the problem persists after trying the steps above, stop using the product and contact [Lechtivo.cz](https://lechtivo.cz) customer support.

 Electronic waste

- Do not dispose of packaging material or old devices in mixed waste — recycle them wherever possible. Sort packaging by material.
- The crossed-out wheelie bin symbol means this product must be handed in free of charge at an electronic waste collection point so it can be recycled for the best possible reuse of raw materials.
- Before handing in an old device at a collection point, remove any non-enclosed batteries and rechargeable batteries. Before disposal, make sure you have erased all personal data from it.

 Batteries

- Batteries do not belong in household waste. As a consumer, you are legally required to return used batteries to a public collection point or a retailer that sells batteries.
- Lithium batteries and battery packs may only be handed in at collection points if they are fully discharged. To prevent short-circuiting, insulate the terminals (e.g. with adhesive tape) before handing them in.
- Batteries containing hazardous substances are marked with the symbols Cd (cadmium), Hg (mercury), or Pb (lead).

**THE ENVIRONMENT**

By recycling, you help protect the environment and support the best possible reuse of raw materials.
